**Aula Morgagni - Policlinico
Universitario, Via Giustiniani 2
Padova**

**For participation
in the event,
registration via
the following
form is
MANDATORY**

Join us for a cross-disciplinary seminar designed to bridge the gap between our diverse research areas. From Clinical Epidemiology to Artificial Intelligence and Digital Health, and from Omics Research, advanced meta-analysis, and Health Science Research to Environmental and Occupational Epidemiology and Ecological Statistics, UBEP is a thriving ecosystem of interconnected expertise. This event is an open invitation to our PhD students, residents, and interested external partners to explore the multifaceted nature of our work. By connecting Projects, People, and Perspectives—with Biostatistics as our common thread—we aim to discover new synergies across all our fields, shaping the future of collaborative research in the AI age
